

MOH. FARIED AL FARIZI

Gresik, Indonesia | +6285236487807 | fariedfarizi24@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portofolio](#)

Fresh graduate in Computer Science from the University of Jember, specializing in Artificial Intelligence (AI), particularly Computer Vision and Natural Language Processing (NLP). Experienced in building innovative data-driven solutions, including developing deep learning models using TensorFlow and PyTorch, data analysis with Python, and API deployment using Flask, FastAPI, and Docker. Solution-oriented, demonstrated through involvement in projects such as a multi-modal public speaking coach application and an agricultural disease detection system. Ready to contribute to a dynamic team to develop practical AI products and solve real-world challenges in the industry.

EDUCATION

University Jember

Aug 2022 – 2026

Bachelor of Informatics, Faculty of Computer Science

GPA : 3.90 / 4.00

- Achievement: Finalist of the Student digital Innovation Competition, 3rd place laos development by UKM Linux and Open Source
- Thesis : “Performance Comparison of ResNet50V2, EfficientNetB4, and DenseNet201 Backbones in Mask R-CNN for Precision Segmentation of Rust Disease in Apple Leaves”, A deep learning-based computer vision study focused on improving disease detection accuracy in agriculture using advanced CNN architectures

EXPERIENCE

Teaching Assistant – Laboratory Artificial Intelligence

Sep – Des 2025

- Assist in Computer Vision and Data Visualization laboratory sessions within the AI Lab, guiding students through hands-on implementation using Python, OpenCV, TensorFlow, and visualization libraries.
- Support course instructors by preparing lab materials and demonstrating techniques
- Evaluate and provide feedback on assignments and projects related to image processing, deep learning models, and data storytelling.

Data Scientist Intern – Sosial Ekonomi Akselerator Lab (SEAL)

Feb – Jun 2025

- Built an automated data cleansing module in Python to standardize 3,000+ government datasets, enhancing data quality and consistency.
- Applied NLP (Sentence-BERT) and TF-IDF + Cosine Similarity to resolve regional name inconsistencies, reducing data merge failures.
- Performed web scraping (BPS), created data visualizations, and configured ETL pipelines using Apache NiFi & Airflow.

Studi Independen

Sep – Des 2024

Bangkit Academy 2022 by Google, GoTo, Traveloka -

Machine Learning Learning Path

(Graduate Distinction)

- Developed TomKits, a leaf tomato disease detection, tomato classification and quality assessment app, using CNN (EfficientNet) with 98% accuracy, built within a cross-functional Agile team.
- Earned TensorFlow Developer Professional Certificate and Graduate Distinction after 400+ hours of intensive machine learning training.
- Enhanced technical and professional skills in Python, data analytics, model deployment, and collaborative project management

PROJECTS

AI Assistant Chatbot for Pharmacy POS

Apr 2026

LLM, RAG, NLP

- Engineered a Hybrid Retrieval-Augmented Generation (RAG) chatbot using LangChain, FAISS, and a local LLM (Ollama) to provide accurate medication recommendations based on a vectorized pharmaceutical dictionary.
- Developed a FastAPI microservice leveraging Sentence-BERT for semantic search of patient symptoms, orchestrated with real-time API calls to a Laravel backend to filter recommendations based on active inventory.

AI Public Speaking Coach Application

Nov 2025

Computer Vision, NLP, Speech Recognition

- Developed a multi-modal AI system that analyzes public speaking performance through video, audio, and text, using MediaPipe for facial/body landmark detection, YOLO for expression recognition, and BERT for speech structure classification.
- Built an audio analysis module using Wav2Vec2 for phoneme clarity, Silero VAD for tempo analysis, and keyword detection with semantic similarity to assess articulation, filler words, and topic relevance.
- Deployed machine learning models via FastAPI, containerized with Docker, and hosted on Hugging Face Spaces

Creating a Chicken Manure Scan Application to Detect Disease

May 2024

Computer Vision

- Developed a Convolutional Neural Network (CNN) model with pretrained model EfficientNetB3 with accuracy 98%
- Designed and created a REST API using Flask and Laravel

TECHNICAL SKILLS

- **Languages** : Python, PHP, Javascript, HTML, CSS, C#
- **Frameworks/Tools** : Tensorflow, PyTorch, Keras, Flask, Laravel, Hugging Face
- **Databases** : MySQL, PostgreSQL
- **Other** : REST API development, Git, Agile collaboration

CERTIFICATIONS

TensorFlow: Data and Deployment (DeepLearning.AI 2024), **DeepLearning.AI TensorFlow Developer** (Coursera 2024), **Machine Learning** (Coursera 2024), **TensorFlow: Advanced Techniques** (DeepLearning.AI 2025), **Machine Learning Terapan** (Dicoding 2025), **Belajar Fundamental Deep Learning** (Dicoding 2025), **Build Better Generative Adversarial Networks (GANS)** (DeepLearning.AI 2025), **Natural Language Processing with Classification and Vector Spaces** (DeepLearning.AI 2024)
